Project Proposal Paragraph

Project Name: Steganography

Team Member: Jeffrey Michaelis

For this project, I would like to explore Black Hat Go chapter that discusses steganography – hiding messages within plain view. This chapter walks us through steganography as it pertains to PNG images, I would like to first implement this view and extend it with the additional exercises in the book. I would then like to extend the implementation to allowing the user to hide multiple messages within a standard image. Also if given time, extending this past just PNG images, I would like to include other file types for my steganography implementation.
